Name: $\qquad$

## Test: Unit8 (1/2) <br> Quadratic formula.

There are 7 questions in this quiz, each of equal value.
Block: $\qquad$

Standard time for the quiz is 30 minutes (or to the end of the block).
Four operations calculator is allowed.

| 1. Solve by factoring (zero product property) $3 x^{2}-11 x+6=0$ | 1'. Solve by factoring (zero product property) $x^{2}-5 x=-4$ |
| :---: | :---: |
| 2. Solve by using the quadratic formula $x^{2}+3.75=4 x$ | 2 '. Solve by using the quadratic formula $2 x^{2}-4.5=0$ |

| 3. Write a quadratic equation for which the <br> solutions satisfy: <br> (a) Sum of solutions is -3 <br> (b) Product of solution is $\frac{1}{4}$ | 3'. Write a quadratic equation for which there <br> is only one solution, equal to 3. |
| :--- | :--- |
|  |  |
|  | 3'. Write a quadratic equation with two <br> solutions, 3 and 7. |

5. The hypotenuse of a right triangle is 25 km long. The length of one leg is 17 km less than the other. Find the lengths of the legs.

5'. Given 3 consecutive integers, the product of the first-two is 7 more than the third integer. Find the 3 integers.
\(\left.$$
\begin{array}{|l|l|}\begin{array}{|l|l|}\hline \text { 6. Write the equation of the line with slope } \\
m=-2 \text { that goes through the point } \\
(x, y)=(3,5)\end{array}
$$ \& \left.\begin{array}{l}6'. Solve: <br>
2 x=y-5 <br>

8=4 y-2 x\end{array}\right\}\end{array}\right]\)|  |
| :--- |
| 7. |
| a. Given the line $y=\frac{1}{3} x+\frac{10}{3}$, find the perpendicular line that goes through the origin |
| (0,0). |
| b. Find the intersection point of these two lines. |

8. Given the parabola

$$
y=\frac{1}{2} x^{2}+1
$$

and the line:

$$
y=x+1
$$

Find the point(s) of intersection between the parabola and the line.

8'. Given the parabola

$$
y=\frac{1}{2} x^{2}+1
$$

and the line:

$$
y=x+0.5
$$

Find the point(s) of intersection between the parabola and the line.
